

ELEVATOR SYSTEM - DESCRIPTION AND OPERATION

1. General

- A. Model 208 elevator system consists of components used to control the elevator up or down.

2. Description and Operation

- A. The elevator is controlled by a control column support that is attached to a pushrod and attached to a bellcrank. Left and right bellcrank arms are equipped with links attached to cables. Left and right cables are routed under the floorboard to turnbuckles in the tailcone. A second set of cables, connected to turnbuckles, are routed to a bellcrank in the tailcone. A pushrod attaches bellcrank to an elevator torque tube. The remainder of system consists of pulleys, cables, supports, and attaching hardware.
