

STRUCTURES - GENERAL

1. Scope

- A. This chapter provides a description of general airplane structures and corrosion characteristics. For repair of structural members and repair techniques used throughout the airplane, refer to the Model 208 Series Structural Repair Manual.

2. Definition

- A. This chapter is divided into two sections briefly described below.
 - (1) The section on structures provides an overall description of the airplane structure and methods of construction used on the airplane.
 - (2) The section on corrosion provides a general description of corrosion characteristics, types of corrosion and typical corrosion areas.
